| C | Common | Species occurs in all or nearly all proper habitats, but some of the presumed suitable habitat are occupied sparsely or not at all and/or region regularly hosts large numbers of species |
| F | Fairly Common | Species occurs in only some of the proper habitats, and large areas of the presumed suitable habitat are occupied sparsely or not at all and/or region regularly hosts substantial numbers of species |
| U | Uncommon | Species occurs regularly, but utilizes little of the suitable habitat, and/or region regularly hosts relatively small numbers of species; not observed regularly in proper habitats |
| R | Rare | Species within its normal range, occurring regularly but in very small numbers. Very rare is used for a species which occurs more or less regularly, but not every year, and usually in small numbers |
| Ca | Casual | A species beyond its normal range, but not so far but what irregular observations are likely over a period of years; usually occurs in small numbers |
| A | Accidental | A species so far from its normal range that further observations are unlikely; usually occurs singly |

Relative Abundance defined
as of September 18, 2001

Common: The species is sighted on 50 percent or more of the daily checklist
Uncommon: The species is sighted on between 49 and 20 percent of the daily checklist
Rare: The species is sighted on less than 20 percent of the daily checklist
Hypothetical: A record for the species within Vuntut National Park has not

Breeding record criteria

A breeding record is recorded only if there was a sighting of an active nest
